

Weekly Progress Report			
Topic:	Chatbot – Final Project	Week No.	11
Course Code:	CSST101, CSST102	Term:	1st Semester
Course Title:	Advance Representation and Reasoning Basic Machine Learning	Academic Year:	2024-2025

### Main Tasks Assigned:

Select dataset for the project

Prepare and preprocess the data

Define project scope and assign roles to team members (if in a group)

### Work Completed:

We have selected our dataset to be the LSPU Student Handbook and have assigned roles in the group, with two of us developing the chatbot and one of us testing it and handling the documents.

### Challenges Encountered:

Currently, we have a .pdf file of the LSPU Student Handbook, but we still have to find a way to convert it into a more appropriate format.

### Solutions Implemented:

We would look for a framework that would be ideal for the type of chatbot we are going to create, so that will be the basis on what type of format the dataset will be.

### Tasks for Next Week:

Select the framework, and prepare the dataset.

### Instructor's Feedback:
